ELECTROMAGNETIC FIELD ISSUES & MITIGATION/SOLUTIONS

Electromagnetic field issues & mitigation / solutions

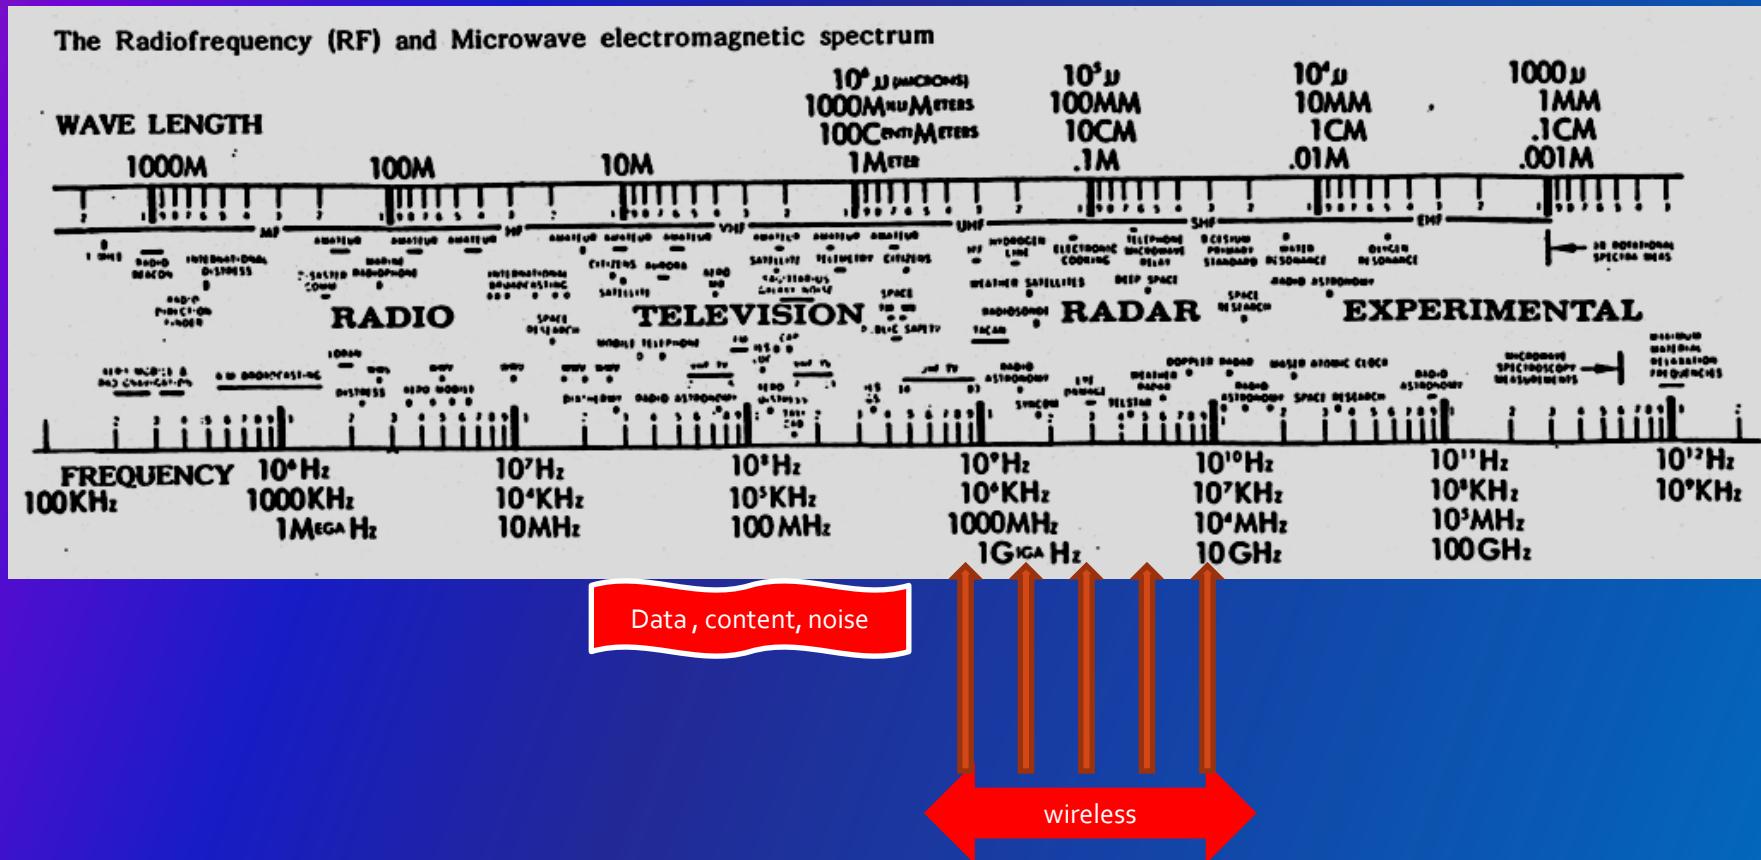

Andrew Michrowski

$$\omega = 2\pi f \text{ (wavelength / frequency formula)}$$

Electromagnetic field issues & mitigation / solutions

Andrew Michrowski

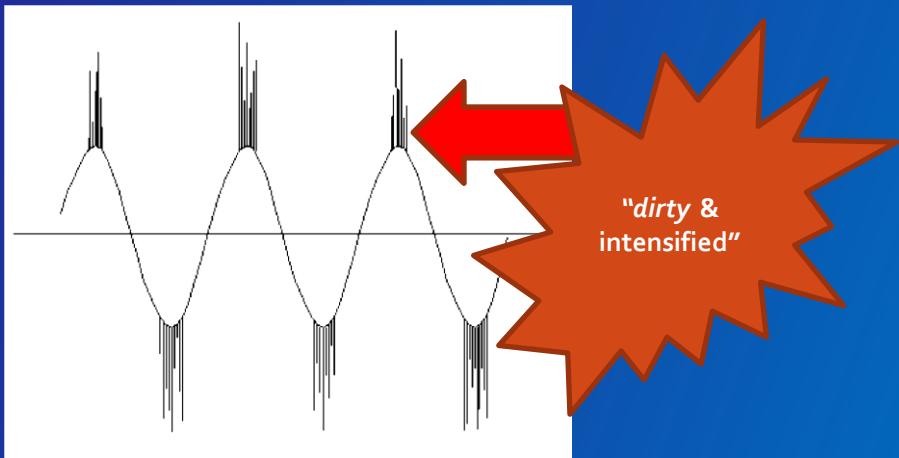

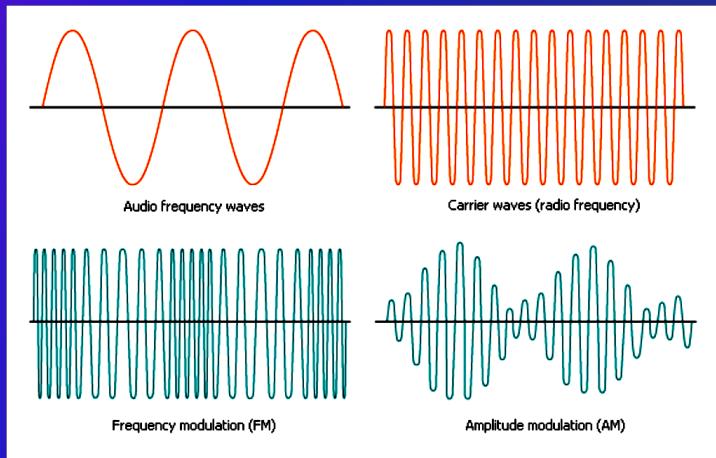

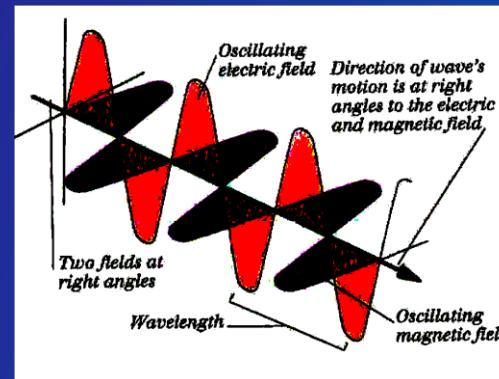

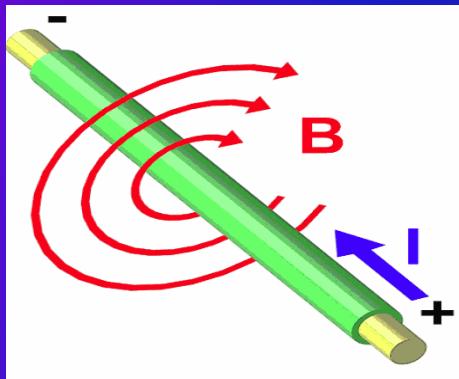

Electromagnetic field issues & mitigation / solutions

Andrew Michrowski

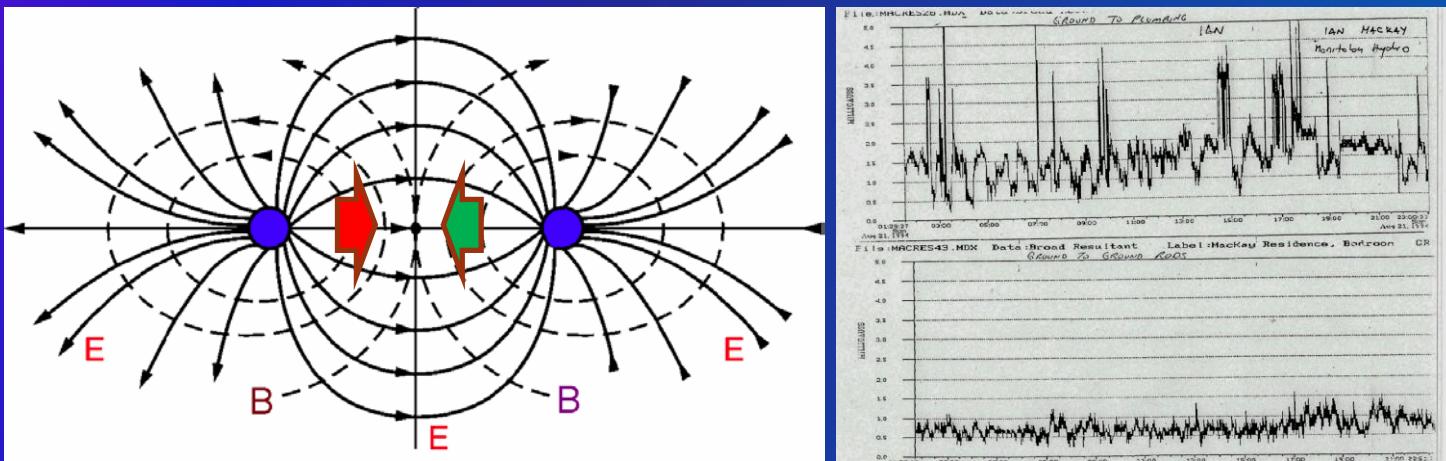

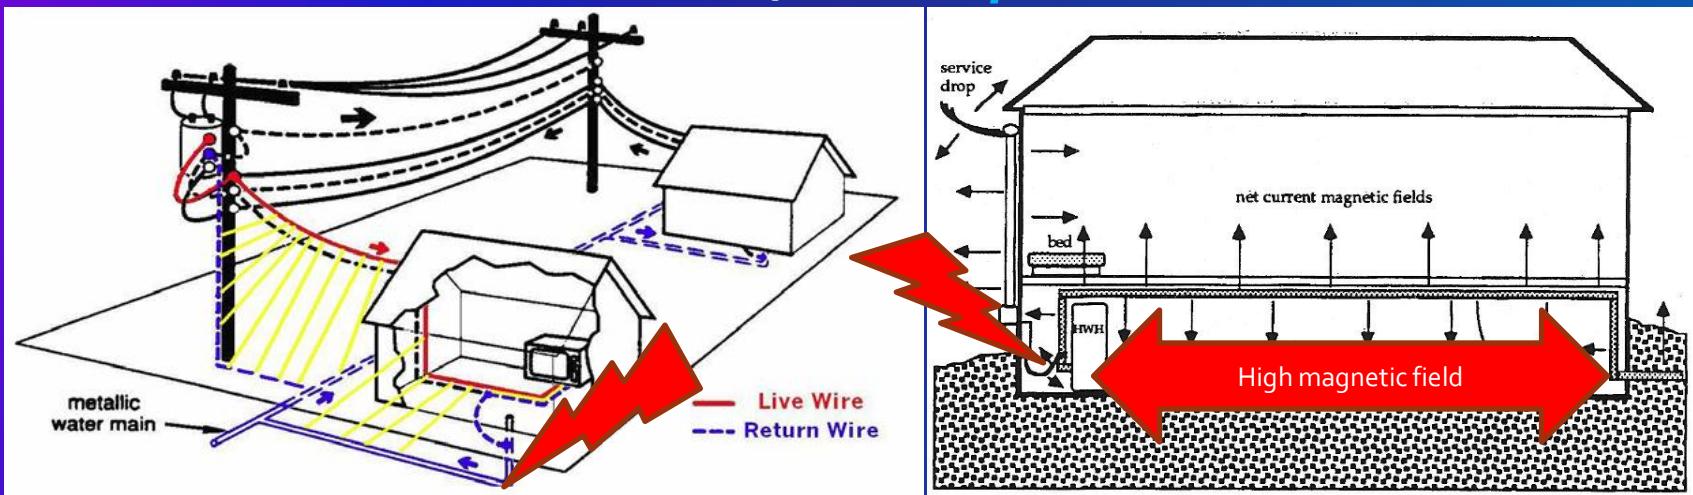

$$W (\text{Watt} - \text{power}) = V (\text{Volt} - \text{electric}) \times I (\text{Ampère} - \text{magnetic})$$

100 Watts passes through 1 Ampère at 100 Volts.

POWER ELECTRICITY - Net current:

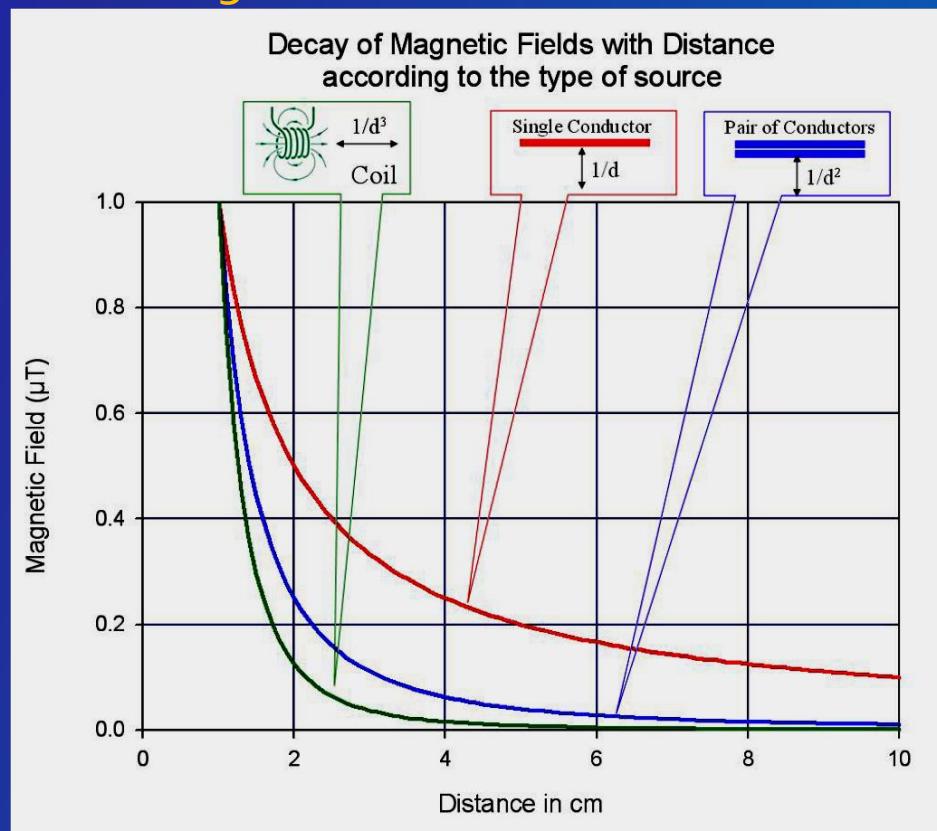

$$1,000 \text{ nT} = 10 \text{ mG} = 1 \mu\text{T} / 1 \text{ Amp at } 1\text{m} = 2 \text{ mG}$$

POWER ELECTRICITY - *Net current:*

Solving this problem helps to reduce magnetic field levels

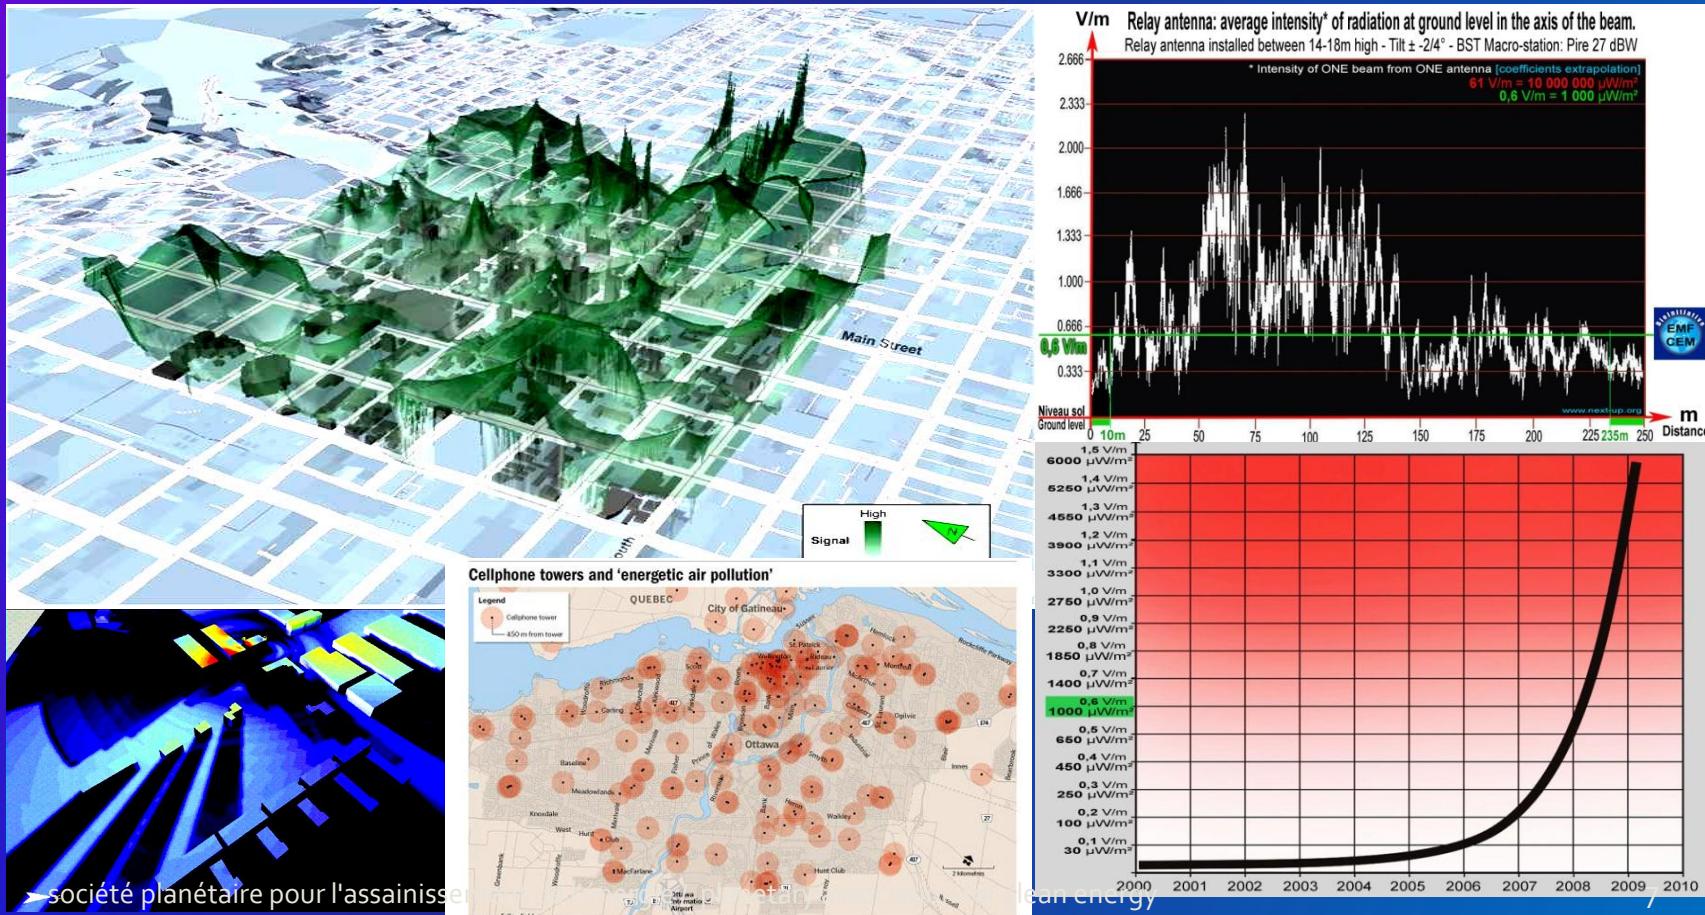

Net current and single conductor current disperse at:
 $1/R$ (radius),
instead of
 $1/R^2$ in typical wiring
or
 $1/R^3$ in transformers.

Electromagnetic field issues & mitigation / solutions

Andrew Michrowski

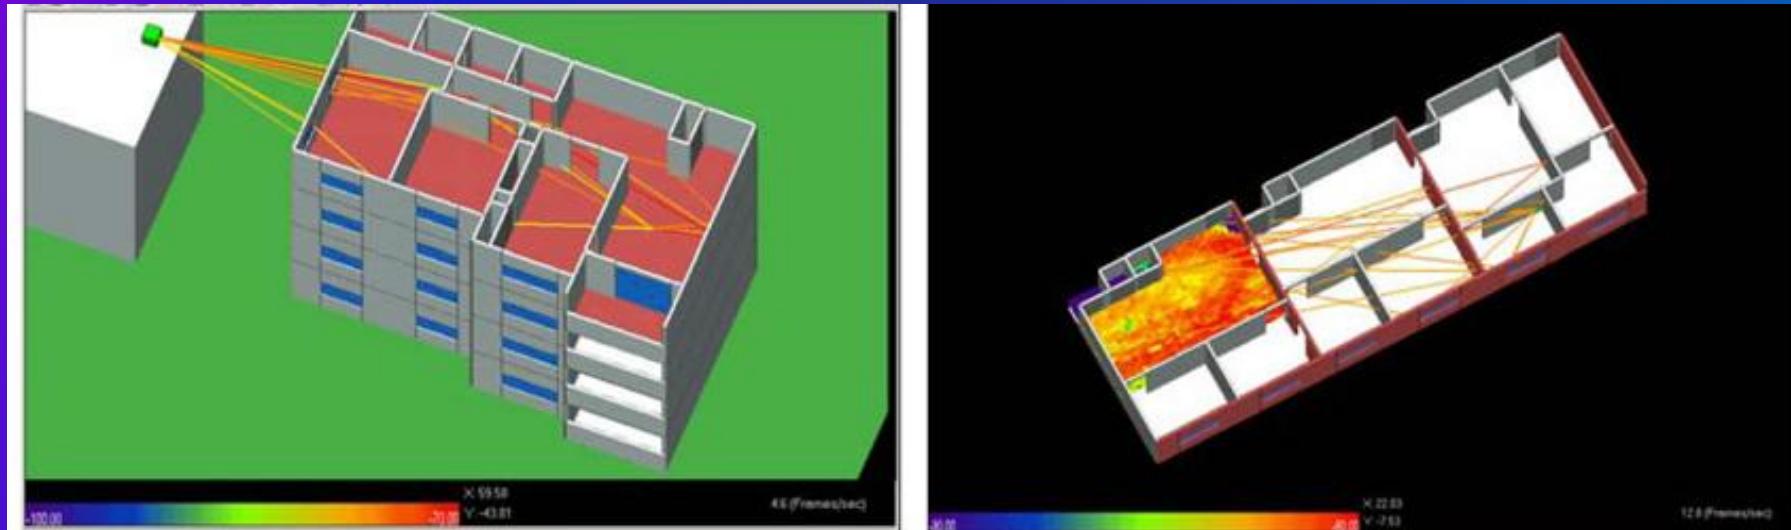

Background propagation of WIRELESS technology: Salt Lake City: at street level; France: typical background levels $2000 - 9 > 0,6 \mu\text{W}/\text{cm}^2$; | Montréal & Toronto 2012: $0,1 \text{ à } 25$ (zones $> 100 \mu\text{W}/\text{cm}^2$); Salzburg: shadow effects , Ottawa: tower sites.

Electromagnetic field issues & mitigation / solutions

Andrew Michrowski

Wireless technology: Reflection

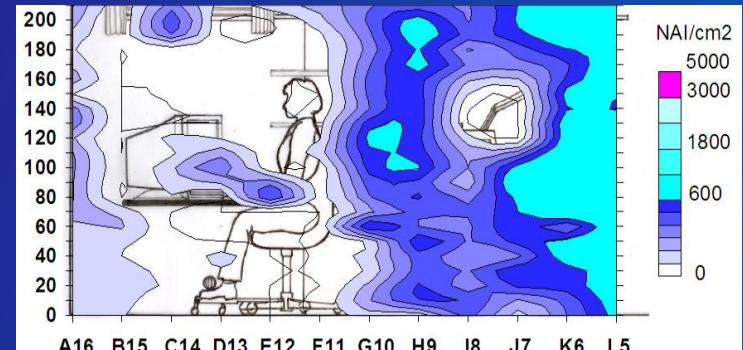

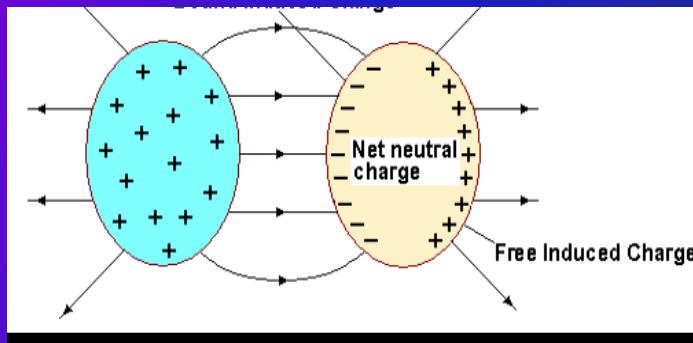

Prudent avoidance – applied: location of appliances

Electromagnetic field issues & mitigation / solutions

Andrew Michrowski

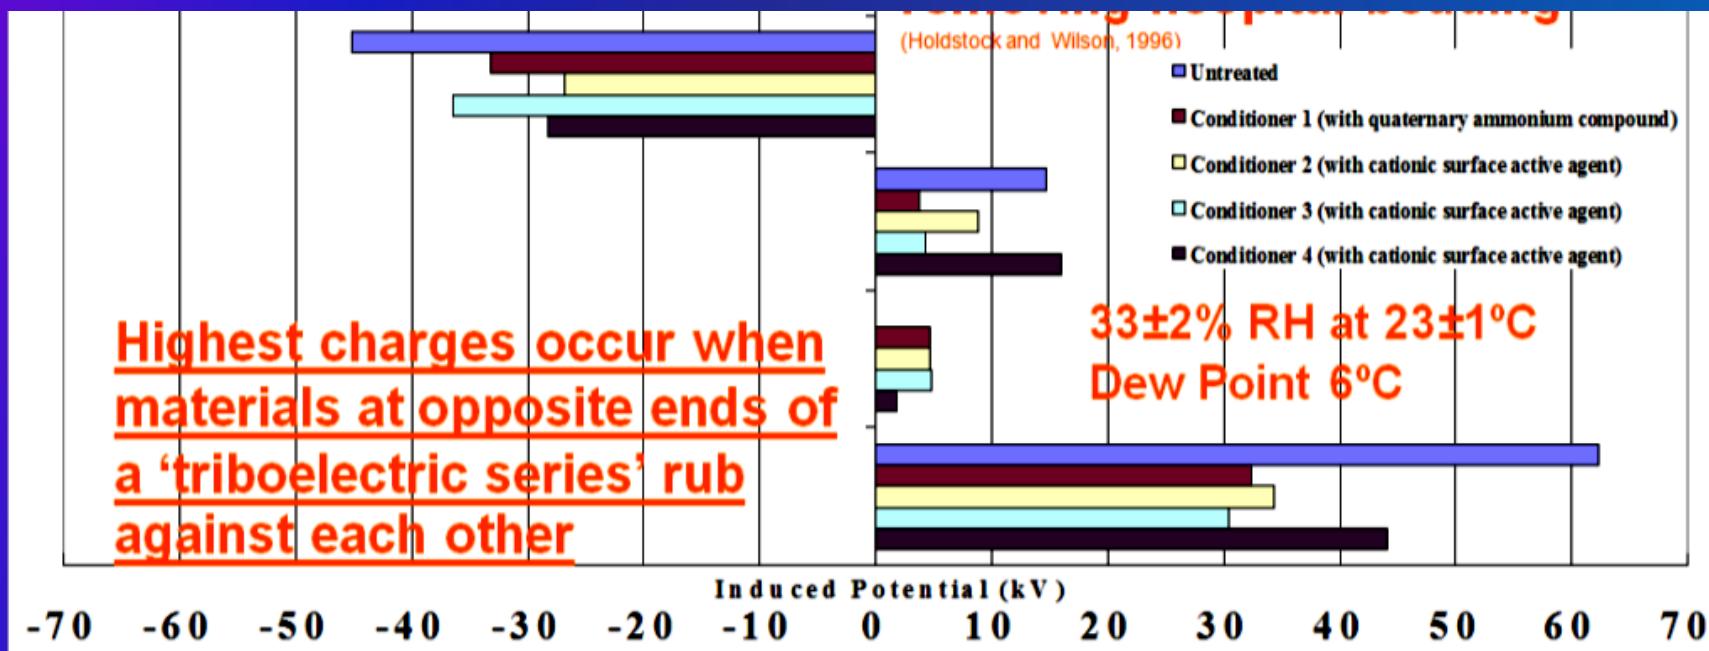

Ions: diametre /contaminant, μ metre, bi-polar charges, ion contours.
(Can be generated by WIRELESS TECHNOLOGY)

Viruses (also in larger droplet nuclei)	<0.01–0.31 μm
Diesel soot	0.01–1
Bacteria (also in larger droplet nuclei)	0.05–10
Fresh combustion particles	<0.1
Metal fumes	<0.1
Ozone and terpene-formed aerosols	<0.1
Environmental tobacco smoke	0.1–0.8
Fine particles (metals, sulphates)	0.1–2.5
Asbestos	0.25–1
Fungi	0.5–30
Cat dander	1–3
Skin flakes	1–40

Mitigation of *Tribo-electric charges* (can be caused by microwave technology)
(Hospital & home beddings).

Upper bar: before removal of bedding; **Centre bar:** after **Lower bar:** humidity effects
(dew points: 23 & 6°C)

Electromagnetic field issues & mitigation / solutions
 Andrew Michrowski

MICROWAVE tech emission levels (nice weather)	$\mu\text{Watt}/\text{cm}^2$
Cellphone / tablets @ user	9 – 3,500
Cellphones / tablets – background, general population	0.01 - 200
Microwave oven @ user	10 – 2,000
“Cordless” station / Router @ 2 to 6m	7 - 17
Analog tower (including, WiFi, <i>lightRadio</i>) urban setting	5 – 25
Digital tower, urban setting ($\cong 100\text{m}$)	0.2 - 5
Analog tower, rural 500m	0.25 - 30
SMART Meter	0.2 – 625.0
Local amplification: metallic elements roofing, studs, frames – ceiling, doors, window; grounding, metal plumbing , unfiltered telecom wiring – HV Lines (\rightarrow 800–1,000 $\mu\text{Watt}/\text{cm}^2$)	1 - 4.5 X power

Quantum-leap-accelerated WIRELESS tech Corrosion

Artificial microwave irradiation of the public:
excess mortality

Quantum-leap-accelerated Wireless tech Corrosion - rebar & surface corrosion – cell tower on water tower – Northern France, autumn 2012

Electromagnetic field issues & mitigation / solutions

Andrew Michrowski

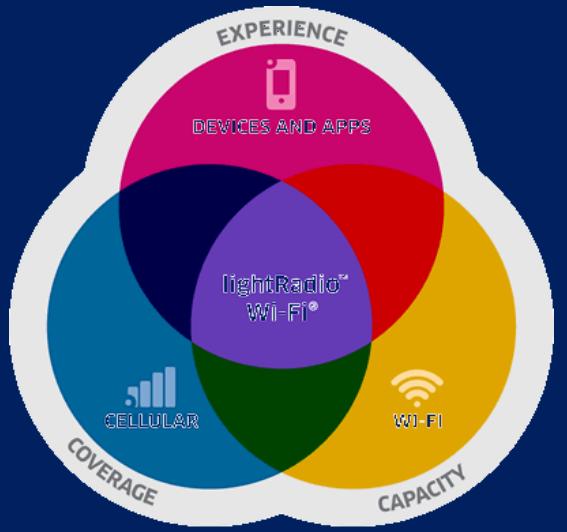

Ottawa Hydro Field Study – December 12, 2013 – “Sources of radiation identified during the inspection were”:

- - **Hydro Ottawa's 900 MHz smart meters**
- - **Customer owned 60 Hz supply voltage and unit wiring within the customer units**
- - **Customer owned 60 Hz supply, end wall wiring and metering center and unit service conductors under the concrete floor**
- - **Hydro Ottawa primary transformer supply approximately 25 feet from the customer unit**
- - **Bell Canada telecom infrastructure**
- - **Bell Canada telecom VDSL Fibe infrastructure**
- - **Rogers cablevision utility termination**
- - **Via Rail train line with RF telemetry**
- - **Ottawa International Airport flight path and resulting RF telemetry and traffic**
- - **City of Ottawa Itron smart meter water meter module with RF broadcast**
- - **Adjacent tenants in area having Wi-Fi connection for their broadband signal for their internet**
- - **Cellular towers for public carriers**
- - **AM & FM commercial radio and television broadcasts**

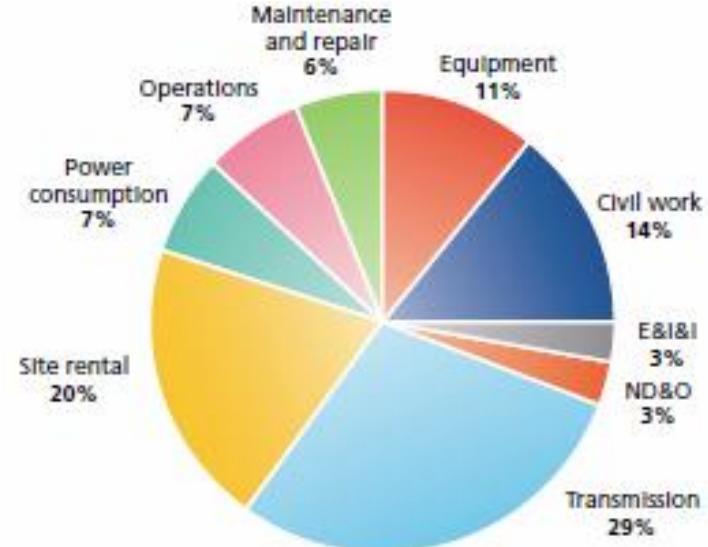

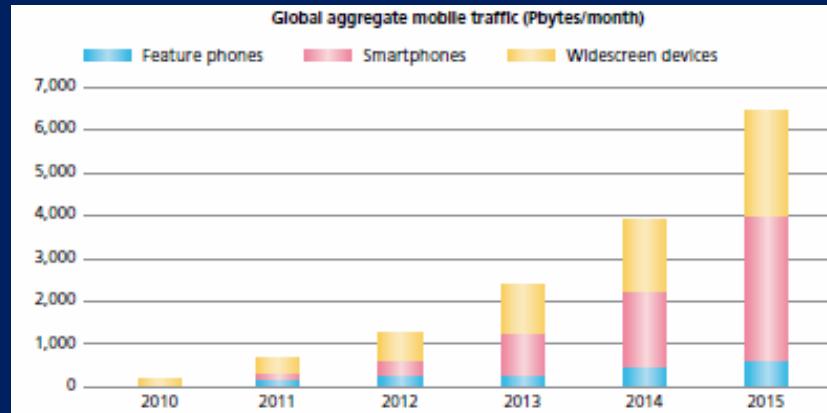

Electromagnetic field issues & mitigation / solutions?

Andrew Michrowski

Trends – lightRadio masts (Wi-Fi) - more data, no regulation, more ground exposure

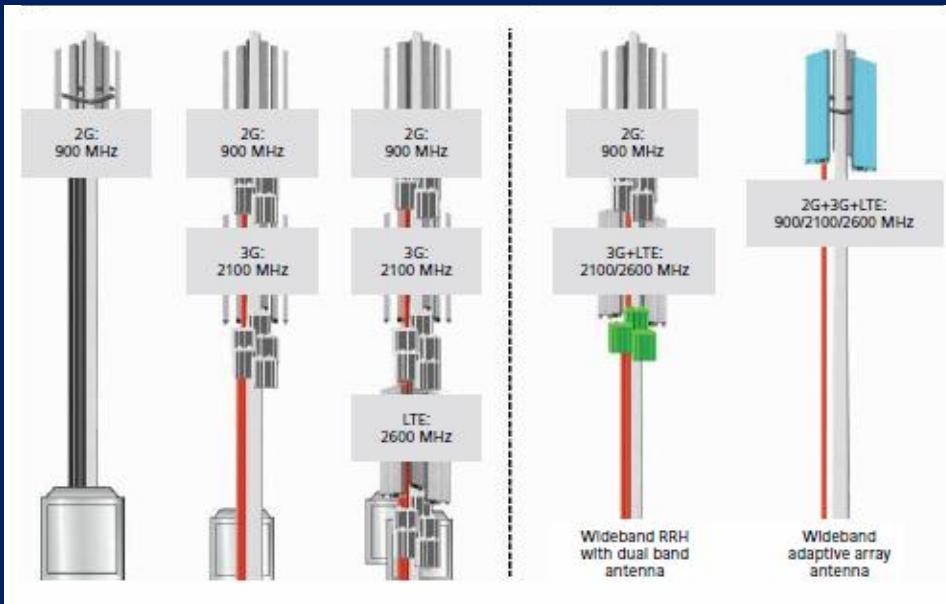

CONFIGURATION	INFRASTRUCTURE AND TECHNOLOGY CAPABILITY		
	BANDWIDTH (MB/S)	LATENCY (MS)	
Copper	2 pair bonding with vectoring and phantom mode 1500 m	100 down 20 up	3
	4 pair bonding with vectoring and phantom mode 1500 m	230 down 40 up	3
	8 pair bonding with vectoring and phantom mode 1500 m	750 down, 150 up	3
Microwave	11-23GHz (Up to 16 km at 11 GHz) 254 bits per frame	305 down, 306 up per radio	~0.15 per hop
	80 GHz (up to 1.5km)	1000	~0.15 per hop
Fiber	10 Gb/s point to point fibre	10,000	0.1 + 0.005/km
	CWDM	8 x 10,000 per fiber pair	0.005/km

Trends (2):

- Software development in-expertises
- Forcing aging population to adapt to the technology.
- Deregulation with new masts (*lightRadio*, etc for LAN)
- Massive electric power consumption by wireless tech

Electromagnetic field issues & mitigation / solution

Andrew Michrowski

Trends: SMART meter fire, quality & safety concerns

Regulations – actual and emerging

Those who are most vulnerable to EMF are: pregnant , child, aged, sick and hyper-sensitive populations .

The World Health Organisation (WHO) (2001) the European Parliament (2009) and the European Council (Resolution 1815) in 2011: (1 milliGauss / 0.1, eventually 0.03, microWatt/cm²) further to the BioInitiative have suggested and provided useful information to improve EMF situation.

There are no standards for extremely low frequency fields in Canada.

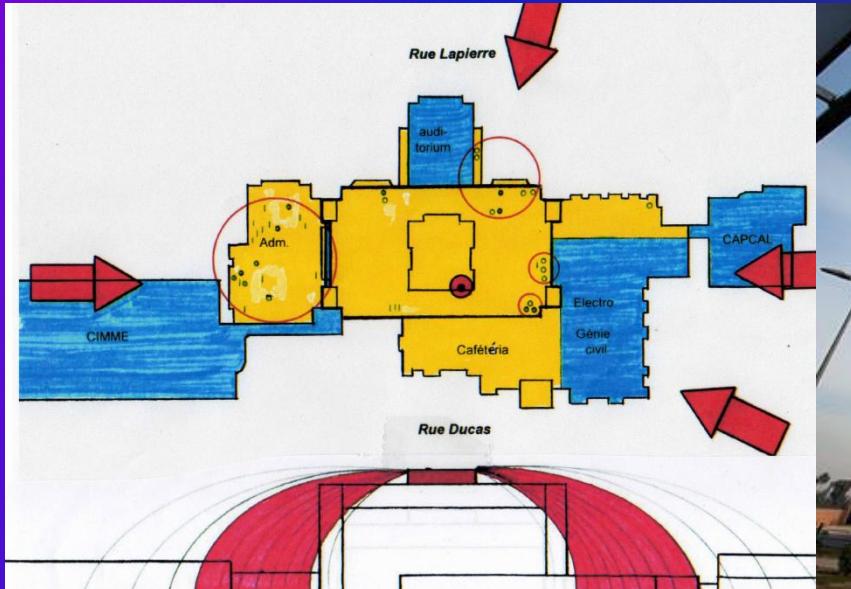

There is no structure for deciding action or discipline in Canada for electromagnetic fields.

**EMF in Canada are among the most elevated in the world
(London-Ottawa-Quebec)**

WIRELESS: *buildings-*

Cégep Laurendeau roof transmitters. Yellow roofing spots indicated clusters of deceased staffers; Red shows emissions; Blue no adverse outcomes reported below meshed roofs;

US embassy in Baghdad shielded from wireless emissions with meshes.

Shielding from electric power magnetic EMF

(10 -300Hz + harmonics & some pulsations activity ELF +)

- MuMetal sheeting – 2 to 20X + reduction
- Fire door (special 2 hour design) – 2 to 4 X
- Field cancelling systems
- Artificial opposing (loop circuit) field in selected zone
(3 vectors X,Y,Z)

Electromagnetic field issues & mitigation / solutions

Andrew Michrowski

Shielding for MICROWAVE technology

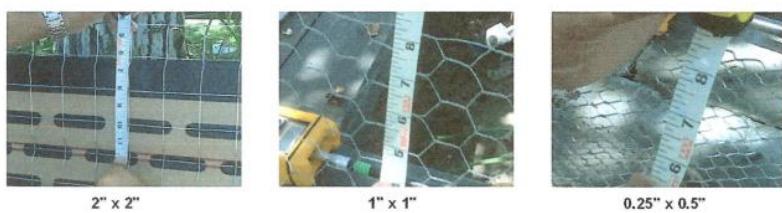

Figure 10-2

Measurement setup to determine the insertion loss presented by a conductive mesh (chicken wire in this case).

Table 10-1

Insertion loss measurement results for three different types of metal lath expressed as a reduction factor (F) and in decibels (dB).

	Panel A lath		Panel B lath		Panel C lath	
Frequency band	F	dB	F	dB	F	dB
900 MHz	2.5	4.1	8.9	9.5	82	19.1
2.4 GHz	1.3	1.2	2.6	4.2	14	11.4

RF Insertion Loss of Different Mesh Sizes

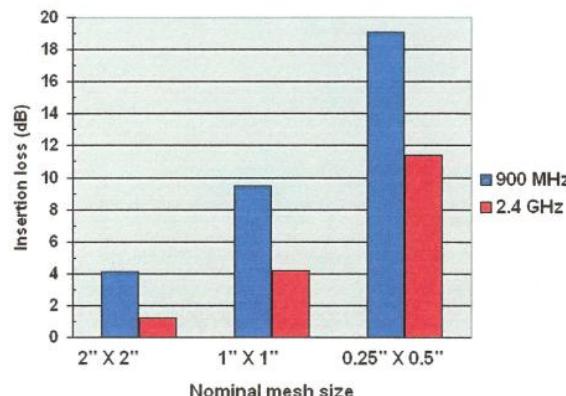

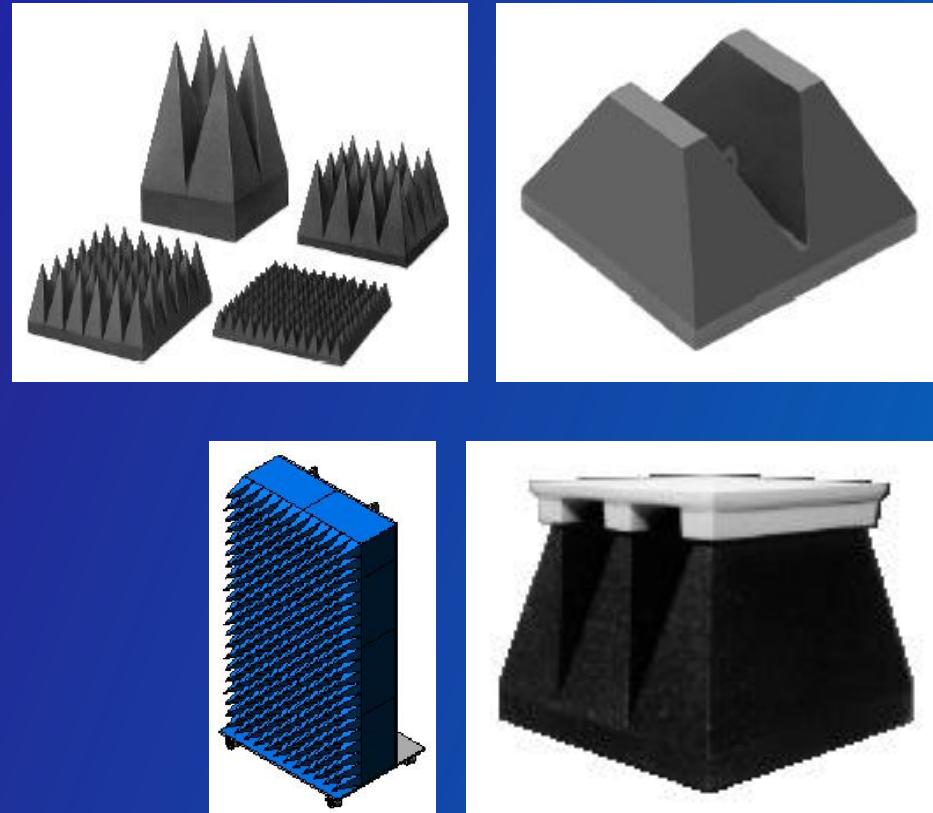

Figure 10-3

Insertion loss of three different metal mesh sizes.
